Experiment -2

AIM: To create MFA for IAM user**.**

Description:

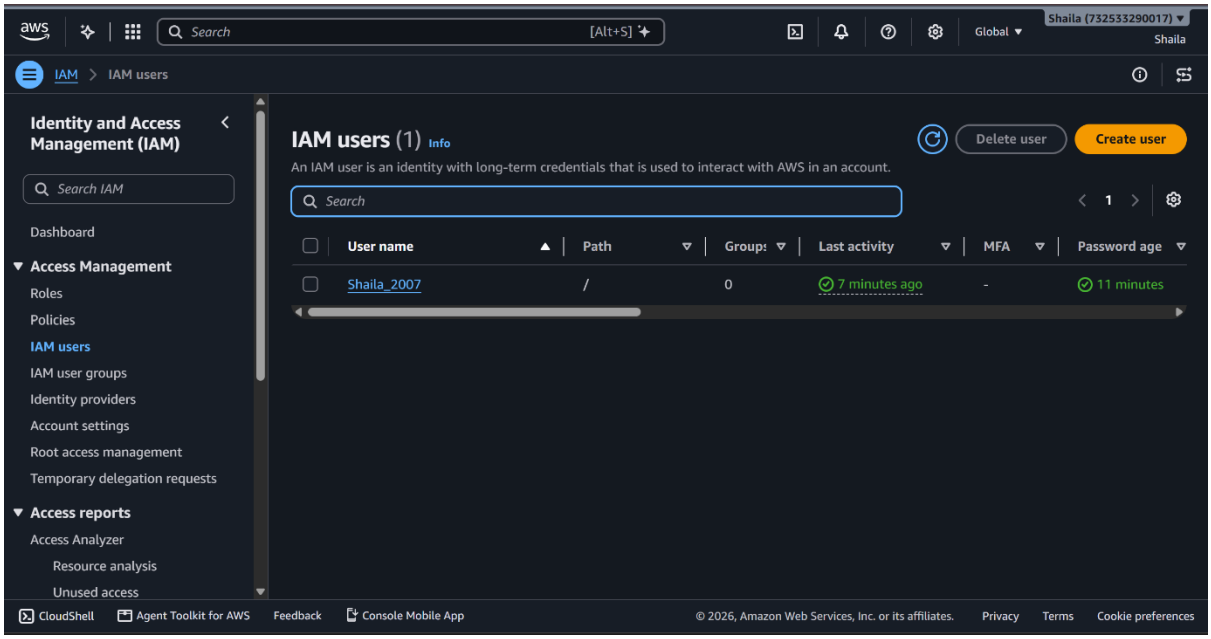

AWS Identity and Access Management (IAM) is a service used to securely manage users, groups, and permissions in AWS. It allows administrators to create individual users and provide access to specific AWS resources based on their requirements. IAM helps improve security by controlling who can access AWS services and what actions they can perform.

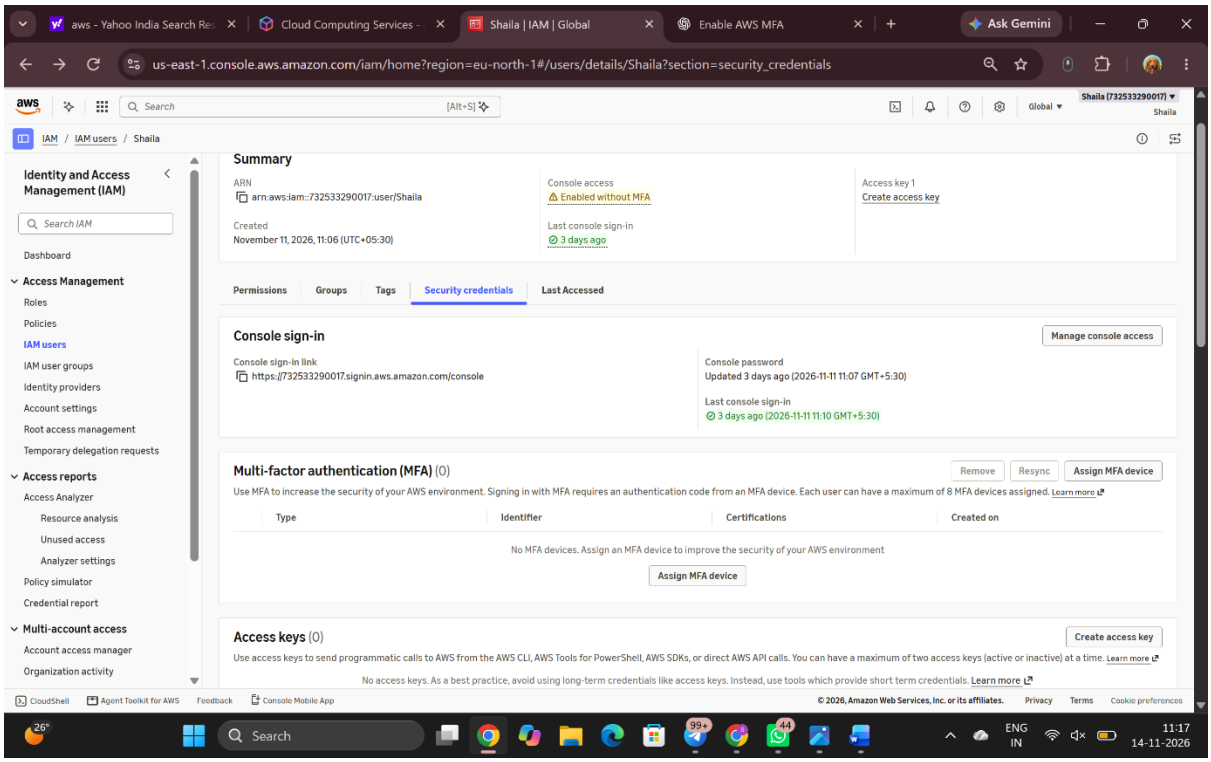

Steps:

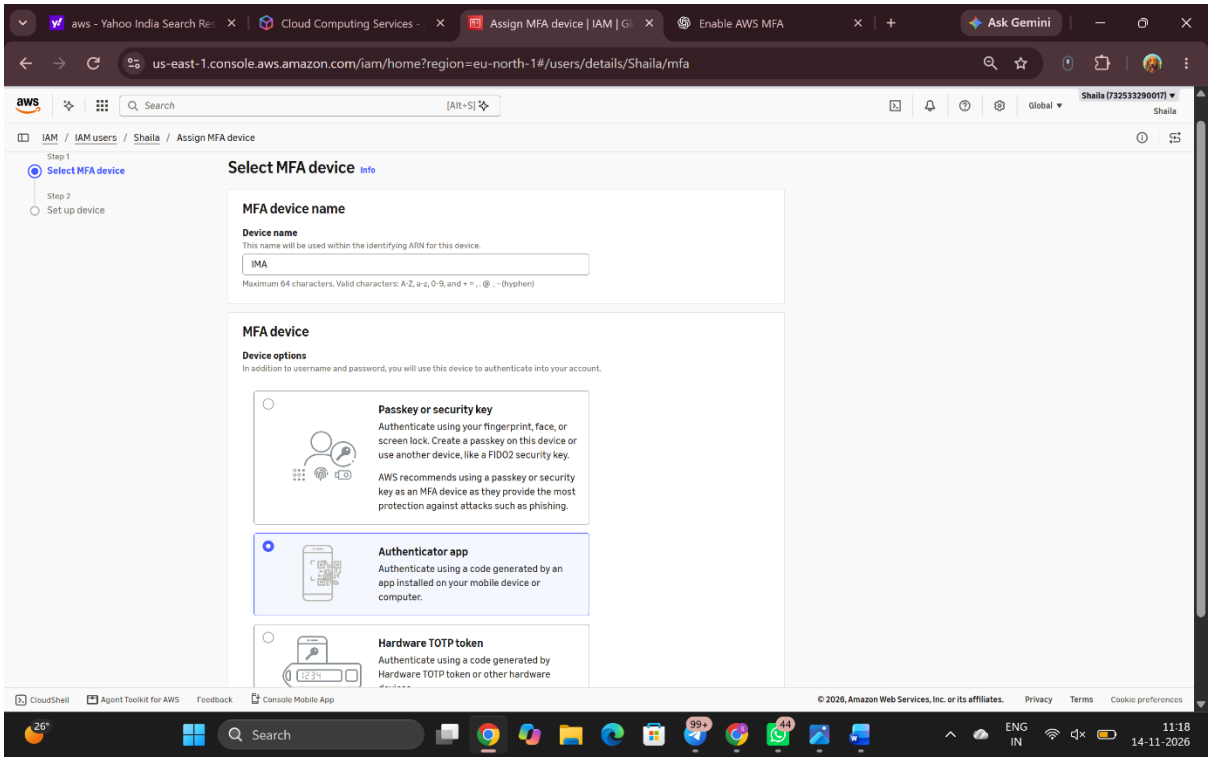

1. Open the IAM service in the console.
2. Click Users → select the user.
3. Open the Security credentials tab.
4. Under Multi-factor authentication (MFA), click Assign MFA device.
5. Give it a name, choose Authenticator app, and click Next.
6. Scan the QR code, enter two consecutive codes as above, and click Add MFA.

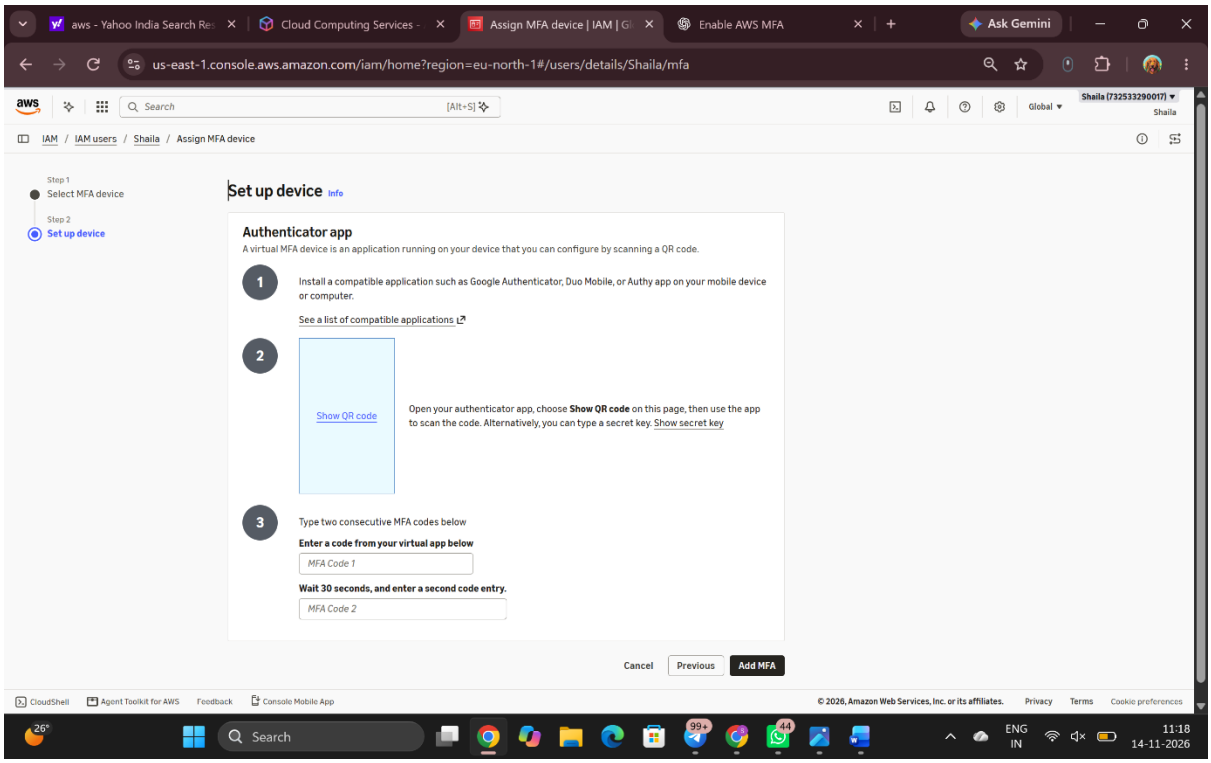

IAM users can also add their own MFA by signing in and going to their account name → Security credentials.

No MFA devices. Assign an MFA device to improve the security of your AWS environment
Assign MFA device
Access keys (0)
Create access key
Use access keys to send programmatic calls to AWS from the AWS CLI, AWS Tools for PowerShell, AWS SDKs, or direct AWS API calls. You can have a maximum of two access keys (active or inactive) at a time.
No access keys. As a best practice, avoid using long-term credentials like access keys. Instead, use tools which provide short term credentials.

MFA device name
Device name
This name will be used within the identifying ARN for this device.
IMA
Maximum 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)
MFA device
Device options
In addition to username and password, you will use this device to authenticate into your account.
Passkey or security key
Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.
AWS recommends using a passkey or security key as an MFA device as they provide the most protection against attacks such as phishing.
Authenticator app
Authenticate using a code generated by an app installed on your mobile device or computer.
Hardware TOTP token
Authenticate using a code generated by Hardware TOTP token or other hardware

Authenticator app
A virtual MFA device is an application running on your device that you can configure by scanning a QR code.
1
Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer.
See a list of compatible applications
2
Show QR code
Open your authenticator app, choose Show QR code on this page, then use the app to scan the code. Alternatively, you can type a secret key. Show secret key
3
Type two consecutive MFA codes below
Enter a code from your virtual app below
MFA Code 1
Wait 30 seconds, and enter a second code entry.
MFA Code 2
